Week 3 – 1:

--Coding-C-Language Features-Optional.

ROLL NO.:240801142

Name : Kadhiroliselvan R D

Q1) Write a program to read two integer values and print true if both the numbers end with

the same digit, otherwise print false.

Example: If 698 and 768 are given, program should print true as they both end with 8.

Sample Input 1

25 53

Sample Output 1
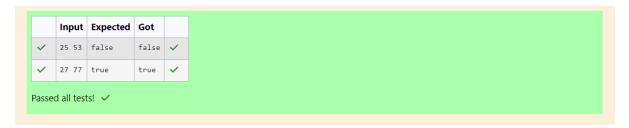

false

Sample Input 2

27 77

Sample Output 2

true

Code:

```c
#include<stdio.h>
int main(){
    int a,last1;
    int b,last2;
    scanf("%d%d",&a,&b);
    last1 = a%10;
    last2 = b%10;
    if(last1 == last2)
    {printf("true");
    }else {
        printf("false");
    }

}
```

OUTPUT:

	Input	Expected	Got	
✓	25 53	false	false	✓
✓	27 77	true	true	✓

Passed all tests! ✓

Q2) In this challenge, we're getting started with conditional statements.

Task

Given an integer, n, perform the following conditional actions:

• If n is odd, print Weird

• If n is even and in the inclusive range of 2 to 5, print Not Weird

• If n is even and in the inclusive range of 6 to 20, print Weird

• If n is even and greater than 20, print Not Weird

Complete the stub code provided in your editor to print whether or not n is weird.

Input Format

A single line containing a positive integer, n.

Constraints

• 1 < n < 100

Output Format

Print Weird if the number is weird; otherwise, print Not Weird.

Sample Input 0

3

Sample Output 0

Weird

Code:

```c
#include<stdio.h>
int main(){
    int n;
    scanf("%d",&n);
    if(n%2 != 0)
    {printf("Weird\n");
    }
    else
    if(n >= 2 && n <=5)
    {
        printf("Not Weird\n");
    }
    else if(n >= 6 && n <= 20 )
    {printf("Weird\n");
    }
    else if ( n > 20)
    {printf("Not Weird");
     }

}
```

OUTPUT:

	Input	Expected	Got	
✓	3	Weird	Weird	✓
✓	24	Not Weird	Not Weird	✓

Passed all tests! ✓

Q3) Three numbers form a Pythagorean triple if the sum of squares of two numbers is equal to

the square of the third.

For example, 3, 5 and 4 form a Pythagorean triple, since 3*3 + 4*4 = 25 = 5*5

You are given three integers, a, b, and c. They need not be given in increasing order. If

they form a Pythagorean triple, then print "yes", otherwise, print "no". Please note that the

output message is in small letters.

Sample Input 1

3

5

4

Sample Output 1

Yes

Code:

```c
#include<stdio.h>
int  main(){
    int a,b,c;
    scanf("%d%d%d",&a,&b,&c);
    if((a*a + b*b == c*c)||
    (a*a + c*c == b*b)||
    (c*c + b*b == a*a))
   {printf("yes\n");}
   else {printf("no\n");
   }
}
```

OUTPUT:

	Input	Expected	Got	
✓	3 5 4	yes	yes	✓
✓	5 8 2	no	no	✓

Passed all tests! ✓
